

Module 4

We will be matching pre and post-tests to assess the integration of new knowledge, skills and attitudes with respect to working with adolescents who are at risk or actively using substances. As such, we will not ask for your name, but a unique identifier which will allow us to pair the pre with the post-test. Please fill in your unique identifier below - it should be your birthdate (Date_Month_Year), gender (M/F) and your first and last initial. For example, for a female named Jane Doe who was born on February 3, 1980, her unique identifier would be **03021980FJD**.

Unique Identifier: _____

Please circle one of the following.

PRE-TEST

POST-TEST

Answer the following true/false questions.

1. A screening should take no more than twenty minutes.
2. The screening is key in developing a treatment intervention plan.
3. It is the youth's responsibility to create a safe environment during a screening.
4. Whenever a youth discloses trauma, the interviewer should prompt the client to continue discussing the details to help them heal.
5. Verbal strategies can help prevent a possible violent behavior in a youth.

Fill in the blanks on the following questions.

6. The _____ should determine the treatment intervention plan.

7. Name two screening instruments for adolescent substance use.

8. Name three substance use assessment instruments for adolescent AOD use.

9. Name three of the most important components of case management.

Check the box which most closely corresponds to your response.

	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree
A screening can give a good idea of what the treatment plan should be for a given adolescent.					
Validated assessment instruments can be adapted for use with Adolescents.					

Case management is often more important than individual therapy in treating youth with substance use.					
Wrap around models cannot be implemented in low-resourced environments.
